

Invoicing & eBilling

Eliminate Paper-Based Invoicing

Automate communication with your customers

The process of A/R Departments distributing invoices to customers is oftentimes a paper-based, manual process which can lead to issues in delivery as well as slow delivery time. Cforia.*autonomy* automates this process with the ability to use eBilling for electronic invoice delivery.

KEY FEATURES

Track Status of Invoice

Track the status of your invoices so you know when they have been sent, received, and opened.

End-to-End Payments Visibility

Customers can view a complete invoice history, from open invoices to closed. They can also initiate disputes and reprint invoices.

A/P Portal Integration

Use vendor-created robots for automated delivery of invoices into portals.

Deliver Invoices via Email

Automatically deliver e-invoices directly to customers using billing information aggregated within the Cforia.*autonomy* platform.

Multi-Language, Multi-Currency

Deliver invoices automatically in your customer's local currency or language.

Pay and Reprint Invoices Online

Give customers the option to pay directly online through the Customer Self-Service Portal.

Cforia's Customer Self-Service Portal is integrated with their workbench. With our former product, we would have had to buy another company's portal and integrate with our collections system – simply not cost effective. When customers pay online, those invoices are tagged with a promise date in MC2 – no more dunning customers that have paid us. It is our goal to be as seamless as possible with customers we do business with and Cforia enables us to meet our commitment to our customers.
